Methodology & evidence appendix

All figures above are rendered from the case's verified artifacts (`model.json`, `valuation.json` produced by the deterministic engines; `report.md` produced by the writer role from the evidence ledger). Every artifact carries the candidate ID, the information cutoff and the input manifest reference. Acceptance: all numerical gates passed; two consecutive clean full critic reviews of the same candidate; findings closed only on critic-verified repairs; human approval recorded before publication.
